PROFILE SUMMARY

Final-year B.E. student in Computer/IT Engineering, graduating in 2028, and a Diploma holder from GTU before that. I work mainly in the MERN stack and have built a full working application on my own, from the database up through a JWT-based login system and a React frontend. I'm looking for a MERN Stack Developer internship where I can work on an actual codebase alongside a team and keep learning as I go.

TECHNICAL SKILLS

- Languages & Core: JavaScript (ES6+), HTML5, CSS3
- Frontend: React.js, Bootstrap, jQuery
- Backend & Database: Node.js, Express.js, MongoDB, REST API Development
- Tools & Other: Git, GitHub, Postman, JWT Authentication,Bcrypt,Gemini API Integration

PROJECTS

AI Resume Builder And Analyzer — Personal Project

Live Demo: ai-resume-analyzer-two-lovat-92.vercel.app | GitHub: github.com/dhruvirsinhgohil

- Built a full MERN app where users can create a resume and get it analyzed and improved with AI
- Connected the Google Gemini API so it reviews the resume content and suggests edits in real time
- Set up register/login from scratch with JWT, so sessions stay secure without relying on a third-party auth service
- Built the UI in React and Bootstrap and tested it across screen sizes so it holds up on mobile too
- Wrote the backend REST APIs in Node.js and Express, with MongoDB and Mongoose handling the data models
- Deployed it on Vercel so it's live and anyone can try it, not just something running locally

EDUCATION

B.E. (Computer/IT Engineering) — Semester 5

Kankeshwaridevi Institute of Technology (Affiliated with GTU) — Expected 2028
Last Year CGPA: 8.20

Diploma in Engineering

Gyanmanjari Diploma Engineering College (Affiliated with GTU) — Completed

STRENGTHS

- Pick up new tools fast when a project needs them — learned the Gemini API on the fly for my resume project
- Like digging into a problem until it's actually fixed, not just patched
- Fine working solo, but just as comfortable in a team using Git/GitHub for version control
